EDUCATION

Master of Science | Computer Science May 2024
Arizona State University, Tempe, AZ 3.67/4.0 GPA

Bachelor of Science in Engineering | Computer Science May 2023
Arizona State University, Tempe, AZ 3.76/4.0 GPA

- Awards: Dean's List, 7 of 8 semesters

SKILLS

Programming Languages: Python, Java, C#, JavaScript, SQL, PHP, C/C++, Kotlin, CSS

Frameworks & Tools: AWS, Spring Boot, HTML, React, Git, Jira, Docker, Kubernetes, Unix/Linux CLI

Databases: MS SQL, PostgreSQL, MySQL, MongoDB, Redis

Relevant Concepts: OOP, REST API, Agile Methodology, Full-Stack Dev, Data Structure & Algorithms

PROFESSIONAL EXPERIENCE

Sparton, DeLeon Springs, FL: Software & Systems Engineer April 2025 - Present

- Led a MES software upgrade initiative by managing cross-functional collaboration between IT and production teams, reducing system risk and improving manufacturing reliability
- Built and shipped web application features front-to-end using C#, .NET Core, HTML, and RESTful APIs, improving training workflow efficiency across the platform
- Designed and implemented a full-stack data pipeline using C# and MS SQL to process, track, and store production data across the buoy manufacturing lifecycle
- Led engineering of manufacturing and test processes for 200+ buoy units, directly contributing to securing new production contracts with the U.S. Navy
- Authored comprehensive unit tests for buoy tracking software, driving a 30% improvement in production efficiency through early defect detection and coverage
- Architected a parts re-routing solution using SQL stored procedures and FactoryLogix, resolving fulfillment gaps and increasing manufacturing output by 50%
- Delivered MES integrations to onboard new product lines into production systems, enabling real-time tracking and data-driven optimization of buoy manufacturing

Hanwha Qcells, Remote: Software Engineer Intern June 2022 - Aug 2022

- Developed a robust API server using Java enabling seamless data exchange between a SQL database and a third-party system, Spring Boot framework, and utilized Postman for testing to ensure reliability
- Optimized database performance, reducing data retrieval time by designing object-relational mapping models and creating data to improve understanding of object-relational designs

PROJECTS

E-Commerce Database Aug 2023 - Dec 2023

- Planned and implemented a distributed e-commerce database using PostgreSQL, incorporating schema design, data distribution, and efficient query processing
- Migrated a relational PostgreSQL database to a NoSQL MongoDB database, consolidating 10 tables into 3 collections, then wrapping the project in a Docker container and using Kubernetes to run it

Movie Recommender System Jan 2023 - May 2023

- Built a movie recommender system using Python and the MovieLens dataset, leveraging advanced algorithms like matrix factorization and collaborative filtering achieving 90% accuracy model
- Collaborated with 3 team members to develop a project similar to popular recommendation platforms like YouTube, Netflix, and Spotify

Video Conferencing Application User Interface Aug 2022 - May 2023

- Collaborated with General Dynamics to conduct a trade study evaluating six UI frameworks, assessing factors such as library capabilities, open-source availability, and maintainability
- Created an intuitive user interface using the Qt framework, incorporating 20+ user stories with detailed pass/fail criteria and graceful error handling
